**ANNUAL REPORT**

**Academic Year 2024 – 2025**

Submitted by  
Dr. Nagaraju Devarakonda  
Faculty Coordinator  
Department of Software and System Engineering, SCOPE

## **Introduction**

The ACM Student Chapter at VIT-AP University actively works towards fostering a culture of technical excellence, innovation, collaboration, and leadership among students. During the academic year 2024–2025, the chapter successfully organized multiple technical and non-technical events aimed at enhancing problem-solving skills, creativity, teamwork, and professional readiness of students.

### **Event 1: Fresher's Techno Mania 2.0**

Fresher's Techno Mania 2.0 was a flagship welcoming event designed exclusively for first-year students. The event created a lively and inclusive environment that encouraged creativity, interaction, and collaboration. Through innovative rounds such as the Excel Art Challenge and Search Quest, participants explored the artistic and logical aspects of technology while building strong peer connections. The event successfully helped freshers integrate into the ACM community and develop confidence in applying technical skills creatively.

### **Event 2: HACKSPEED**

HACKSPEED was an F1-themed competitive coding event that tested participants' speed, accuracy, and problem-solving abilities under time pressure. With multiple elimination rounds covering programming fundamentals, debugging, and algorithm design, the event offered an intense yet rewarding experience. Participants appreciated the real-world simulation of high-pressure technical environments, making HACKSPEED both educational and exhilarating.

### **Event 3: HACKZILLA – 24 Hour Online Hackathon**

HACKZILLA was a 24-hour online hackathon that challenged participants to conceptualize, design, and develop innovative solutions within a constrained timeframe. Teams were given the freedom to use any technology stack, including AI tools, fostering creativity and experimentation. The live project presentations before the jury enhanced participants' communication skills and provided valuable feedback from experienced evaluators. HACKZILLA simulated real-world product development cycles and significantly enhanced participants' technical confidence.

### **Event 4: Technical Group Discussion – Impact of AI on Creativity**

This technical group discussion focused on the evolving relationship between Artificial Intelligence and human creativity. Participants shared diverse perspectives on AI's role in art, music, literature, and software development. The discussion promoted analytical thinking, ethical awareness, and respectful debate. Students demonstrated strong communication skills and gained deeper insights into how emerging technologies are reshaping creative industries.

### **Conclusion**

The events conducted during the academic year 2024–2025 reflect the ACM Student Chapter's commitment to holistic student development. By combining technical rigor with creativity and collaboration, the chapter successfully created impactful learning experiences that prepared students for future academic and professional challenges.

### **Authorization**

I hereby certify that the above information is true and correct to the best of my knowledge.
